結晶成長コミュニティー “今話題の結晶成長テーマ”

塚本 勝男

Recent Advanced Topics on Crystal Growth

Katsuo TSUKAMOTO

Abstract

Recent advanced topics on crystal growth have been discussed for the last one year in the three symposiums sponsored by JSF and former NASDA. All these topics are not directly related to the present space experiments, but we have confident that these topics will surely be investigated also in space in a near future. The topics cover self-assembly of nano-materials, chirality of molecules and the control of microstructure of crystals.
