¹ JAXA 宇宙科学研究所, Institute of Space and Astronautical Science, Japan Aerospace Exploration Agency

Since last summer, this group, which has been active as Study Group for New Space Exploration and LOC of the 3rd International Moon Village Workshop & Symposium (MVA2019), has resumed its activities as "Study Group for Building a Society on the Moon and Planets" (commonly known as "Moon Village Study Group") to continue these activities¹⁾. The purpose of this group is to provide a forum for free and vigorous discussion to reveal what should be considered when imagining human activities on the scale of a society on the Moon and planets. In this group, we assume the initial conditions of a sustainable society on the Moon, where 1,000 people settle down and 10,000 people come and go between the Earth and the Moon per year. In order to build such a society, we have organized subcommittees for architecture, life science, business, social science, and humanities, and are deepening our study by collaborating each viewpoint. In this presentation, the past activities of the Moon Village Study Group will be reported.
